

Ollama Installation and Test Scripts

Install Ollama:

```
curl -fsSL https://ollama.com/install.sh | sh
```

Check Installation:

```
ollama --version
```

```
systemctl status ollama
```

Start and Enable Ollama:

```
sudo systemctl start ollama
```

```
sudo systemctl enable ollama
```

Pull DeepSeek Coder Model:

```
ollama pull deepseek-coder:6.7b-instruct
```

```
ollama list
```

Run Model Interactively:

```
ollama run deepseek-coder:6.7b-instruct
```

Python Virtual Environment Setup:

```
python3 -m venv myenv
```

```
source myenv/bin/activate
```

```
pip install requests
```

Python Test Script (test_ollama.py):

```
import requests
```

```
def ask_ai(prompt):
```

```
    url = "http://localhost:11434/api/generate"
```

```
data = {  
    "model": "deepseek-coder:6.7b-instruct",  
    "prompt": prompt,  
    "stream": False  
}  
  
response = requests.post(url, json=data)  
response.raise_for_status()  
result = response.json()  
return result.get("response", "")  
  
error_log = "TypeError: Cannot read property username of undefined"  
prompt = f"Analyze this error and suggest a fix:\n{error_log}"  
  
print(ask_ai(prompt))
```
