

Raspberry Pi Website Hosting - Terminal Commands

1. Update your package list:

```
sudo apt update
```

2. Install Apache web server:

```
sudo apt install apache2 -y
```

3. Find your Pi's IP address:

```
hostname -I
```

4. Go to the Apache web root folder:

```
cd /var/www/html
```

5. Remove the default Apache index page:

```
sudo rm index.html
```

6. Copy your landing page files into the folder:

```
sudo cp ~/landing-page/index.html .
```

```
sudo cp ~/landing-page/style.css .
```

7. Visit the site in your browser:

```
http://localhost
```

or

```
http://[your-pi-ip] (e.g., http://192.168.1.230)
```
